

Data Logger

Data Capture Software

- ◆ Flexible application generator
- ◆ Ideal for shipping, receiving & inventory operations
- ◆ Operates with Weber's portable & laser data terminals
- ◆ Interfaces with Weber's labeling software

For easy programming of your portable data capture devices, Weber supplies the latest version of Data Logger software, the leader in innovative application generators.

Operable on any Windows-based computer, Data Logger lets you program and test unlimited applications with what-you-see-is-what-you-get precision. The software's flexibility allows you to place fields where you want them, move them from page to page and mask any one with a variety of data entry controls, including field names, max/min characters, alphanumerics, check digits and summary counters, to name a few.

Additionally, Data Logger provides simulation capabilities that allow you to prescreen your program before incorporating it into your application. Programs can be generated for numerous applications, such as shipping, receiving, inventory and others.

Data Logger operates with Weber's family of portable data terminals (PDTs) and laser data terminals (LDTs) for on-the-spot-scanning of bar-coded information. By attaching Data Logger's verify files to fields, you can know immediately that you are scanning the right data at the right time.

Collected information can then be incorporated into other software applications for various operations. For instance, Data Logger is compatible with Weber's exclusive labeling software, so labels can be formatted and printed from the information collected via PDTs.

For complete control of your bar code operation, Weber also offers on-site labeling systems that can include high-performance pressure-sensitive label materials, thermal/thermal-transfer label printers, even fully integrated print/apply labeling systems.

Data Logger

Software Specifications

System Requirements

- AT or better IBM-compatible computer
- Windows 3.1, Windows '95, or Windows NT
- 2 MB of RAM or more
- One 3.5" floppy drive and one hard disk drive with at least 5 MB available
- Serial communications port

Typical Applications

- Print Bar Code Labels
- Inventory
- Sales Order Entry
- Shelf Price Audit
- Cycle Counting
- Quality Control
- Retail Store Functions: sales, deposits, transfers, returns, employee hours
- Shipping
- Order Picking
- Receiving
