

# Weber Service Bureau

## ***We can print and/or encode labels for you!***

If on-site labeling is not a cost-efficient alternative for your company— or you need to supplement your in-house label printing capability— we offer our exclusive Weber Service Bureau. Our in-house label printing and encoding operations enable us to produce both RFID smart labels, bar code, and other variable-imprint labels for you.

It's fast and economical, plus you eliminate the capital, labor and inventory expenses that can be associated with doing it yourself. And turnaround time is no problem. We can have your RFID or bar code labels printed and out the door in 48 to 72 hours.

### ***RFID Smart Labels***

Don't worry about meeting the latest RFID mandates. We will make certain that you're ready to comply with the emerging RFID supply chain requirements of major retailers and government agencies.

The Weber Service Bureau is equipped with the latest RFID smart label printer-encoders from Zebra Technologies. These units encode data on very thin, ultra-high frequency (UHF) RFID transponders embedded in pressure-sensitive smart labels and tags, then immediately verify proper encoding to ensure readability.

The systems also print text, in-spec bar codes and/or graphic on the surface of the label at a resolution of 203 dpi. Smart labels embedded with Electronic Product Code (EPC) Gen 1 and Gen 2 transponders can be encoded.

RFID smart labels are ideal for:

- Walmart, Albertson's, other retailers and U.S. government RFID labeling standards.
- EPC RFID compliance
- Case/pallet identification labels
- Auxiliary supply chain applications

### ***Bar Code & Variable-Imprint Labels***

For high-volume requirements, the Weber Service Bureau has added a high-quality, in-line digital imprinting capability to our high-speed flexographic label printing operation.

Called Jetrion, it's a proven, on-press inkjet system that delivers excellent image quality and reliability. It's ideal for large- or mid-volume print runs that require imprinting like bar codes (1D and 2D), text, sequential number, expiration dates – virtually any job that requires variable data.

Jetrion operates at up to 250 fpm and provides up to 9.5 inches of potential print width. Print resolution can be up to 316x526 dpi. All bar codes are verified prior to shipping.

Lower-volume printing projects can be completed with choice of off-press printing techniques, including direct-thermal, thermal-transfer, and laser. We print bar codes of various size, density and orientation, plus all popular one- and two-dimensional symbologies.

After printing, we scan your bar code labels to ensure they meet specifications. Our quality is guaranteed, of course.

Bar code and variable-imprint labels from the Weber Service Bureau satisfy a wide variety of applications, including small or large volumes of labels for:

- Automotive industry compliance
- Retail labels and tags
- Property/asset management
- Forest products/horticultural tags
- Product/pallet identification and tracking
- Bin/shelf labeling
- Parts identification
